ABOUT

Product designer with nearly 4 years of experience, focused on complex products that require deep product thinking. I enjoy designing experiences grounded in data - combining user research, usability testing, and analytics with a deep understanding of business needs. I invest heavily in product discovery before any concept takes shape: mapping what works, aligning user needs with business goals, and using that foundation to build interfaces that are both intuitive and high-quality. Strong background in design systems, complex products, multi-layered flows, and mobile design - and I actively work with AI agents and agentic workflows, both as part of my process and as products I've designed for.

EXPERIENCE

Product Designer Fireart Studio

Jul 2022 - Present

Via Fireart Studio, worked across a range of client projects spanning fintech, government, fitness, cybersecurity, and logistics.

Governmental platform - NDA

Jan 2025 - June 2026

- Worked on a government digital platform (under NDA) consisting of a CMS and an admin dashboard; owned and led the design of multiple core flows.
- Created the visual style foundation for the product's design system: designed the color system and typography, and translated them into reusable tokens and guidelines.
- Built and maintained a design system: structured the component library, ensured consistency across screens, and supported documentation for scalable use.

Cybersecurity startup - Cortwo

Nov 2024 - Jan 2025

- Designed early product concepts for a cybersecurity startup (B2B/B2C): explored key user journeys and interaction patterns for secure online communication/access.

Crypto payments platform - NextG / Aeon

Feb 2024 - June 2024

- Designed web and mobile interfaces for a fintech platform integrating fiat and crypto payments (virtual accounts, blockchain wallet, cross-border transfers); built and maintained the product's design system.

Fitness app - Sadie Active

Oct 2023 - Feb 2024

- Redesigned SadieActive mobile fitness app - improved training and nutrition flows through user research, focusing on emotional engagement and intuitive interaction design across the full mobile experience.

- Redesigned SadieActive mobile fitness app - improved training and nutrition flows through user research, focusing on emotional engagement and intuitive interaction design across the full mobile experience.

SKILLS

Product & UX Design: End-to-end product design, UX strategy, information architecture, interaction design, wireframing, prototyping

Visual & UI Design: Mobile design (iOS/Android), web design, responsive layouts, visual design, typography, color systems

Design Systems: Building and maintaining component libraries, design tokens, documentation, cross-team consistency

Research & Testing: User research, usability testing, research synthesis, journey mapping

AI & Emerging Tools: AI tools and agentic workflows, prompt engineering for design tasks

TOOLS

Figma • Claude Code • Cursor • Lovable • Figma Make • Jitter
